

These sketches indicate a possible replacement for Dolphin Hall and are intended to represent a multi purpose facility. It would be set within the existing site with formally laid out car parking and access.

Access into the building is through an entrance foyer from which all areas are approached. An office with box office counter leads into a Committee Room/ Council Chamber. Toilet facilities are located off the foyer including a disabled toilet.

The main hall is 210 square metres and allows for 240 seat theatre layout with either two or three isle format. A formal stage area with a proscenium arch is indicated with storage and drama room to the rear.

The hall has four emergency escape routes to comply with current standards for the evacuation of up to 300 people. There are also food and drinks serveries direct into the hall area. A 37 metre square kitchen is provided capable of serving functions including weddings.

A multi purpose function/meeting room of 64 square metres is provided with a direct kitchen access. It could be used for play groups, aerobics classes, small private functions or exhibitions.

As illustrated the facility is 558 square metres (6006 square feet) in extent. The shape of the hall is flexible and could be made wider but with the same area if consultation dictates.
